

Dashboard Documentation

Overview

This document explains the design, KPIs, calculations, visualizations, and business logic used within the Inventory Tracking Dashboard.

Dashboard Components

KPI Cards

Total Inventory Value

Displays total inventory worth.

Total Products

Displays number of products.

Average Stock Level

Displays average inventory quantity.

Stock Turnover

Displays inventory efficiency.

Visualizations

Stock by Category

Type: Clustered Bar Chart

Purpose: Analyze inventory distribution across categories.

Warehouse Comparison

Type: Column Chart

Purpose: Compare inventory levels among warehouses.

Inventory Trend

Type: Line Chart

Purpose: Track stock changes over time.

Low Inventory Alerts

Type: Table

Purpose: Highlight products below threshold inventory levels.

Filters and Slicers

Available Filters:

- Product Category
 - Warehouse
 - Date
 - Inventory Status
-

DAX Calculations

Inventory Value

```
Total Inventory Value =  
SUMX(  
    Inventory,  
    Inventory[Quantity] * Inventory[Unit Price]  
)
```

Stock Turnover

```
Stock Turnover =  
DIVIDE(  
    SUM(Inventory[Units Sold]),
```

```
AVERAGE(Inventory[Quantity])  
)
```

Low Inventory Flag

```
Low Inventory Flag =  
IF(  
Inventory[Quantity] < 50,  
"Low Stock",  
"Available"  
)
```

Performance Optimization

- Reduced unnecessary columns
- Optimized DAX calculations
- Implemented data model best practices
- Enabled efficient filtering

Security

- Read-only dashboard access
 - Published through Power BI Service
 - Controlled workspace permissions
-

Maintenance Guidelines

- Refresh dataset regularly
- Review low stock thresholds
- Monitor data quality
- Update warehouse mappings
